Bluetongue Guidelines for Sale

Being in the Zone, at this sale we can sell livestock to buyers within the Zone or buyers of breeding stock which has been pre movement tested and will be post movement tested.

All Lots have details of their Bluetongue Blood Testing Status in the [Vendor Index](#) for each breed.

What this means?

1. Vendors with **NO COMMENTS** about Bluetongue underneath their name, are animals from within the BT Zone that can only be sold to Purchaser's within the Zone. They have not been and not going to Blood Test them.
2. Vendors with '**BLUETONGUE BLOOD TESTED**' underneath are animals from within the BT Zone that have been BLOOD TESTED CLEAR FOR BLUETONGUE and can be sold to Purchaser's all over the Country. Those outside of the Zone MUST post-movement test the stock 6-10 days after the sale.
3. Vendors with '**CAN TAKE BACK & BLUETONGUE BLOOD TEST FOR VENDORS OUT OF ZONE**' underneath are animals from within the BT Zone that have **NOT** been tested BUT the Vendor is willing to take them back home and Blood Test them before they go to the Purchaser outside of the Zone. Those outside of the Zone MUST then post-movement test the stock 6-10 days after the sale. They can be sold to Purchaser's inside of the Zone with free movement and no Blood Test required.
4. Vendors with '**OUTSIDE BLUETONGUE ZONE**' underneath are animals from outside of the BT Zone that can be sold to Purchaser's all over the Country. Those outside of the Zone MUST post-movement test the stock 6-10 days after the sale.

DISCLAIMER

The pedigree, performance, genomic information stored by the Society in the iTexel database and published on society pedigree certificates, reports and general publications is as supplied by, or on behalf of the breeder. The responsibility for the accuracy of the information therefore rests solely with the breeder and not with the British Texel Sheep Society Ltd (BTSS).

Health information and footnotes that are stored in iTexel and published in sales catalogues produced by the society, is supplied by or on behalf of the vendor. The responsibility for the accuracy of the information therefore rests solely with the vendor and not with the British Texel Sheep Society Ltd (BTSS).

Performance data and breeding values change over time as new data becomes available.

Whilst every effort is made to ensure accuracy of the information contained in society reports and publications, no responsibility can be accepted by the Society for any errors or any reliance on the use of information. No warranty is given in respect thereof by the BTSS and, to the maximum extent permitted by law, the BTSS have no liability for any loss, damage or injury howsoever caused (including that caused by negligence) or suffered directly or indirectly in relation to information and opinions contained or omitted from BTSS publications.

The Texel Sheep Society provides data collection and performance reporting services to its membership. From 2024, the service and evaluation combines pedigree and genomic data to provide indexes that are simple to use and understand.

In simple terms: higher value = more profit per lamb

The texelplus economic indexes support the breed's development with an increased focus on commercial traits and profitability. The **TERMINAL** and **REPLACEMENT INDEXES** reflect the breed's influence on industry. Both are presented as the potential extra profit per lamb born in a commercial setting, compared to the population baseline.

Index	Average	Top 25%	Top 10%	Top 5%	Top 1%
Terminal Expected change in profit per terminal lamb born	£4.08	£5.33	£6.46	£7.13	£8.40
Replacement Expected change in profit per replacement lamb born	£4.72	£6.10	£7.34	£8.09	£9.48

The **TERMINAL INDEX** supports increased profitability through improving prime lambs and is weighted strongly for meat production. The **REPLACEMENT INDEX** includes additional maternal traits to optimise production of female replacements.

Commercial producers solely producing prime lambs should use the **TERMINAL INDEX** to inform their selection; however, those retaining female replacements should use the **REPLACEMENT INDEX**.

Sub-indexes underpin the indexes to provide more information on the relative values and ranking of animals for growth, fat and muscle weight, and reproduction.

An example

High ranking rams can deliver over £4.50 per lamb more than lower-ranking rams. Over a ram's working lifetime, this is easily worth an extra £690 per ram; generated through shorter finish times and improved carcass quality.

Trait weighting

Different emphases are given to individual traits between the terminal and replacement indexes. This results in different sub-index ranks.

Growth sub-index

Captures the benefit from growth using eight-week weight and scan weight information. Faster growth is more advantageous.

Muscle weight sub-index

How an animal ranks for muscle weight in the carcass. Encourages muscle growth.

Fat weight sub-index

How an animal ranks for fat weight in the carcass. Encourages fat cover.

Reproduction sub-index

The commercial benefit of lambing ease, litter size and maternal ability. Promotes optimum litter sizes and better mothers.

Accuracy

A measure of the accuracy of the index. The higher the number the better.

Index values

The sum of the sub-index values and potential profit per lamb born for terminal and replacement production.

Ranking

Where the animal ranks in the population.
